

Dashboard Requirements | Admin Panel (EXTRAATJE)

Goal: Show relevant KPIs and data in a modular dashboard that allows admins to track performance, engagement and operational actions in a clear, actionable way.

1. Filter Options (Global)

- **Default View:** Show data per current month (standard).
- **Custom Range Filter:** Allow manual selection of:
 - Specific date range (from-to).
 - Daily, weekly, monthly, or custom periods.
 - Entire dashboard updates dynamically when filters are changed.

2. Top Performers Module

- Display the **top 10 performing employees** based on:
 - Points earned.
 - Sorting option: monthly.

3. Inactive Users Module

- Show a list of users who haven't been active for **X days**.
 - **Definition of inactivity:** No login activity **or** no points earned in selected period.
- Admin must be able to:
 - **Set the inactivity threshold (e.g., > 30 days).**
 - Export this list.
 - Click to send a reactivation message or campaign (in future release).

4. To-Do / Action List Module

- Some rewards require manual action from the EXTRA admin (e.g. physical delivery).
- This widget shows:
 - **All redeemed rewards that require admin action.**
 - Button to mark as completed (double verify).

5. 🧑 Filter by Role / Function

- Add a global filter to view dashboard data **per employee role**, e.g.:
 - Housekeeping
 - Chef
 - Horecamedewerker
- When selected, all widgets adapt to show data for that specific group.

6. 🎁 Most Redeemed Rewards

- Display the top 5 or 10 most redeemed rewards in selected period.
- Show:
 - Name of reward.
 - Number of redemptions.
 - Total points spent on it.

7. 💵 Total Points Issued

- Total points given to users within selected period.

8. 👤 User Stats

- **Total registered users** (per period).
- **Total active users** (at least 1 action, login or point activity).
- Growth indicator compared to previous period (%).
- Optional: New users this month.

9. 🔄 Modular Dashboard Layout

- Admin should be able to:

- Drag and rearrange widgets.
- Hide or show specific modules.
- Save their preferred dashboard layout (per user).
