

Proposal for EXTRAATJE: Loyalty & Engagement Platform Development

Submitted by: Helios Solutions

Date: 29th July, 2025

Client: Max Claushuis

Project: EXTRAATJE Platform Development (Web App & Admin Dashboard)

INTRODUCTION:

Helios Solutions is a global IT consulting and software development company with a strong presence across Europe, UK and America. Specializing in digital transformation, we offer a wide range of services including enterprise solutions, software product engineering, and emerging technologies like AI, IoT. We have delivered more than 400 success stories across 10 industries, helping businesses innovate and scale through customized, future-ready solutions.

Thank you for the opportunity to collaborate on the EXTRAATJE platform—a gamified loyalty and engagement system for temporary workers. Based on your comprehensive briefing, this proposal outlines our approach, deliverables, timeline, and key considerations to build a fully integrated, scalable solution that aligns with your mission to increase worker loyalty, motivation, and brand differentiation.

CONTEXT AND PROBLEM STATEMENT:

EXTRAATJE is a loyalty and engagement platform developed for temporary workers employed through EXTRA. The system is designed to **reward and motivate staff** by tracking their performance and encouraging repeat engagement through gamified features. It integrates with the scheduling software **Planworks** and includes both an **employee-facing interface** (with rewards, deals, challenges, and leaderboards) and an **admin dashboard** for real-time management.

A working prototype has already been built in Replit, and the platform will evolve further with future modules such as automated email marketing and WhatsApp triggers.

PROBLEM STATEMENT:

To increase engagement, retention, and brand differentiation in the staffing market, EXTRAATJE needs a **fully functional, real-time, gamified reward system** that:

- Seamlessly integrates with Planworks via API,
- Allows admins to manage rewards, challenges, deals, and communication in real-time,
- Offers a responsive, intuitive UI for employees,
- Automates personalized communication via **email and WhatsApp**, and
- Supports **scalable, data-driven growth** through future features like onboarding flows, inactivity resets, and marketing automation.

The challenge is to design and develop a platform that meets these goals while maintaining high responsiveness, system accuracy, and ease of use for both admins and employees.

SCOPE OF WORK:

SR	Users	Module	Features	Readiness of Module
	Employee/ Worker Panel			
1		Rewards	Automatic points allocation (Planworks integration, business rules, inactivity reset) Filter/display rewards user can afford (points check) Reward claim, deduction, and history will be stored in the Transaction table design simple Assuming API docs available; points rules finalized. Rewards UI skeleton exists.	⚠ Partial
2		Deals	Display list of Discount Deals. - Claim deal: deduct points, email code/QR to employee Note: SMTP config, deals CRUD	⚠ Partial
3		Challenges	Progress bar for tiered challenges (Planworks + manual) We will use UI library which supports progress bars	⚠ Partial
4		Challenges	Request admin validation for manual challenges	✗ Missing
5		Milestones	Badge/progress logic (No animation, thresholds). It depends on Points logic. We will use simple CSS	⚠ Partial
6		Leaderboard	Monthly reset, show own rank, correct lifetime/period logic. Timezone rules fixed, period logic defined	⚠ Partial
7		Leaderboard	Previous month's top performer featured. Only needs UI + backend field	✗ Missing

8		Localization	Language switch (fully wire all UI text) Need to refactor, also client need to provide all the content label, logo, static dropdown values, validation messages.	⚠ Partial
9		Real-time sync	Real-time UI update for admin changes	✗ Missing
10		Role-based logic	Chef-specific points logic, Need to establish Points allocation logic	✗ Missing
11		Role-based logic	Worker-specific points logic	✗ Missing
	Admin Panel			
12		Rewards Mgmt.	Pause/remove reward, set custom point value - Simple CRUD and UI feedback, 5mb file limit, at time one file only	⚠ Partial
13		Deals Mgmt.	Upload image/QR/code, set desc/type, full CRUD - File upload, Accept only common formats	⚠ Partial
14		Challenges Mgmt.	Assign to user, type/source logic, robust CRUD	⚠ Partial
15		Challenges Mgmt.	Manual challenge status override for user	✗ Missing
16		Leaderboard Mgmt.	Manual score adjustment (UI & backend)	⚠ Partial
17		User Mgmt.	User list and role assignment	✗ Missing
18		Inactivity override	View/override inactivity reset per user - Points reset logic	✗ Missing
19		Real-time update	Dashboard reflects live state instantly	⚠ Partial
20		Authentication & Access	Full admin/user RBAC (Role based Access Control) - Use JWT/session; RBAC lib available Login with Email and Password.	⚠ Partial
21	Planworks Integration	Data Sync	Real API/webhook/manual sync, full field mapping - Webhook setup and implementation	⚠ Partial
22		Account/Email	New Planworks user onboarding + onboarding email - Client will share template for the same.	✗ Missing
23		Event-driven logic	Update points/challenges on Planworks events	✗ Missing
24	System	Real-time (websockets)	Production-grade websocket/pubsub for sync	⚠ Partial
25	System	SMTP Email	Onboarding, claim, trigger-based emails via SMTP	⚠ Partial
26	System	Security	Endpoint auth, RBAC (Role based Access Control), permission model	⚠ Partial

27	Project Management and Tracking	Project Planning, Verification of Deliverables, Interim Demo Requirements Management Handover	Deep understanding case handling for Points earning and Deal Claiming. End-to-end flow mapping for all user's journey	
28	Project Setup	Repo setup, env configuration, shared tool access, ESLint/prettier, Replit-to-local transfer	Git and Repo. Setup Local Project Setup, Common component setup Environment setup for Dev, UAT and Production	
29	DB Design and Creation	Schema design (User, Points, Rewards, Transactions, Levels, Notifications)		
30	Manual Testing	Test case writing, execution, bug reporting (Structured test documentation) Generate test summary, defect logs (Exportable reports)		
31	Deployment	Final deploy, versioning, UAT support - Interim Demo and Releases - UAT Deployment - Production deployments - Handover Documentation		

Assumptions

- 1 MVP includes only the defined Employee modules (Rewards, Deals, Challenges, Leaderboard) and core Admin dashboard modules.
- 2 System will support responsive design for mobile and tablet screens.
- 3 Dark theme and multilingual support (English and Dutch) are included across all user interfaces.
- 4 Planworks integration assumes accessible API for shifts, referrals, performance, and ratings.
- 5 Role-based logic: Employee roles (Admin, Chef, Horecamedewerker) will have distinct point-earning rules.
- 6 Points for birthdays, punctuality, and service anniversaries will be triggered automatically based on available data.
- 7 Email and WhatsApp modules rely on third-party APIs (SMTP, Twilio or similar) with opt-in support and GDPR compliance.
- 8 Inactivity rule: if no shifts are worked for 3+ months, user points will be

automatically reset unless overridden by Admin.

- 9 Admin panel includes manual control over point adjustments, challenge status, and user profile updates.
- 10 Real-time updates via Webhook or WebSockets or polling fallback.
- 11 Initial setup, schema design, and CI/CD deployment included in base effort.
- 12 Admin can manually override or input missing data from Planworks if sync fails.
- 13 Deployment includes staging and production setup using client-provided or public cloud infrastructure. Client is responsible for sharing Cloud or deployment platform for hosting.
- 14 System scope doesn't involve any data scrapping, image processing, QR Code reader or scanning, data entry or Payment method integration; Any Integration other than specified in the feature list will be considered as out of scope.
Client will provide Replit account for the development team for the development of Phase-1 Scope.
- 15 For multi-lingual client is responsible to provide data in English and other supported language with mapping.
- 16 Summary of Testing Coverage for

Web Interface:

> Browsers: Chrome (97+), Firefox (96+), Edge (97+) on Windows; Safari (15+), Chrome (97+), Firefox (97+) on Mac.

> Resolutions:

- Desktop (1920x1080)
- Tablet (768x1024)
- Mobile (375x667)

> OS: Windows 11, macOS Ventura (13.x) or later.

Mobile App (Android):

> OS Versions: Android 13, 14.

> Device Types: Mid-range smartphone (6.1–6.3" screen), budget smartphone (6.4–6.6" screen).

> Resolution: 1080x2400.

AI Usage and Tool

Factor:

- 1 For "Medium" and "High" AI usage rows, you can consider reducing effort by **10–25%** depending on developer familiarity and module complexity. Please keep in mind AI Tools are evolving.
- 2 Development team will leverage AI-assisted development tools (e.g., GitHub Copilot, Cursor, Replit) to enhance productivity, improve code quality, and reduce manual effort in repetitive tasks.
- 3 Development Team will use AI for Boilerplate code generation (create repetitive, standardized code sections required in software projects) like Build Login Module (UI + Auth), Class structures, function headers, configuration files, requires templates for routing & Navigation

- 4 AI tool will be widely used for Writing unit tests and Improve test case generation
-

TIME ESTIMATE:

- Phase 1 (Core Platform): 340 Hours
 - Phase 2 (Marketing & WhatsApp): 70-80 hours
 - Final quote may vary depending on scope refinements and integrations.
-

KEY CONSIDERATIONS:

- **Security:** All data operations will be protected via role-based access and encryption.
 - **Real-Time Experience:** Admin actions reflect instantly on the employee side.
 - **Performance:** Scalable backend with optimized DB queries for handling large user data sets.
 - **Maintainability:** Modular, well-documented codebase for future updates.
 - **Mobile Responsiveness:** Full responsive design to support usage on phones/tablets.
 - **User Privacy & Compliance:** GDPR compliance for user data and communication.
-

DELIVERABLES:

- Fully functional web application (employee + admin)
 - API integration with Planworks (data pull + triggers)
 - UI/UX designs (if not provided, we can assist)
 - QA-tested, responsive build
 - Documentation + admin training session
-

NEXT STEPS:

If this proposal aligns with your vision, we can schedule a kick-off meeting to:

- Finalize technical requirements
- Clarify responsibilities on both sides (access, branding, hosting)
- Lock the project schedule
